Bowness Public Conveniences.

Toilet Accessible Doors

When the district council earmarked the Bowness in Windermere public toilet block for closure, the Bowness and Windermere Community Care Trust stepped in with a bid to bring them up to scratch.

Chosen for its resilience, Steeldor was specified for the project. Easy to fit and maintain, the security doors were finished with stunning, highly colourful graphics that highlight the local wildlife and some of the Lake District's less well-known beauty spots.

Kirkby Stephen Business Park.

Personnel Entrance Doors

Kirkby Stephen Business Park is the brainchild of two local farmers, who pooled their energy, investment and resources to build new, bright, modern units for local businesses. They chose Steeldor for the new office units, maintaining security without compromising on looks.

These doors offered the perfect solution for this project incorporating letter boxes and Part M compliant vision panels, finished in the popular anthracite colour option.

Blackpool.

Fire Exit Doors

This conversion from a well-known Blackpool arcade into a public house is a success story that bears all the hallmarks of the owner's astute buying, pricing, high turnover and excellent brand awareness.

From the beginning of the project, Strongdor worked closely with the architects involved with the design, selection, supply and fitting of the best steel doors for the unusual and striking roof terrace restaurant.

What made this project particularly unique was the need to fit the panic bars to the outside of the double fire exits on the roof terrace, open to the renowned Blackpool weather and the beach-front saline environment.

FIRE-RATED STEEL DOORS

Key features

-  **FIRE RATING**
Up to 2 hours fire-rated
-  **OPTIONS**
Louvre and vision panels up to 1524mm
-  **ACOUSTIC**
Up to 36dB acoustic rating
-  **U-VALUE**
As low as 1.5 W/m²K
-  **SECURITY**
Available as PAS 24 or LPS 1175 SR2 security rated
-  **FAST LEAD TIMES**
Strongdor has you covered!
-  **SMOKE RATING**
Available smoke rated to BS EN 1634-3:2004 + AC:2006, earning up to E120Sa4 classification.
-  **AVAILABLE WITH TONGUE & GROOVE DESIGN**

If the worst happens and fire breaks out, then seconds can make a huge difference. Independently tested and certified, Fire dor has all the versatility and durability that you would expect from a Strongdor steel door, plus impressive test ratings up to two hours.

Suitable for both internal and external applications. CE marked to BS EN 14351-1 and EN 16034 standards.* For fire and thermal ratings, look to Fire dor Thermal for U-value as low as 1.5 W/m²K. Fire dor Latchless and Fire dor Smoke are your go-to solution for those high-traffic environments.

* Please note only external fire doors are CE marked.

Fire^{dor} Case study

Ardmore Distillery.

Internal and External Fire-rated Doors

Nestled in the charming landscapes of Aberdeenshire, there lies a distillery celebrated for crafting world-famous Scotch whisky. Established in 1898, this enduring establishment is dedicated to the production of the finest Ardmore Whisky.

In a quest for durability that parallels the longevity of their historic building, the distillery turned to Strongdor for exceptional quality and visually striking doors. The choice was Firedor internal and external doors, selected for their certification and impressive 2-hour fire rating. Adorned in a sleek pure red finish, these door-sets complement the distillery's aesthetic, combining both functionality and strength.

SECURITY-RATED STEEL DOORS

Strongdor security-rated steel doors offer reassurance in an increasingly apprehensive world. Physically tested and third-party certified to international standards, these steel doors are built to withstand the most punishing tests.

They can be rated to:

- PAS24:2022.
- LPS1673 Attackdor, A300 & B180E rating options available.
- LPS1175, A1 (SR1), B3 (SR2), C5 (SR3), D10 (SR4) rating option available (Secured by Design option is also available)

Acoustidor® Case studies

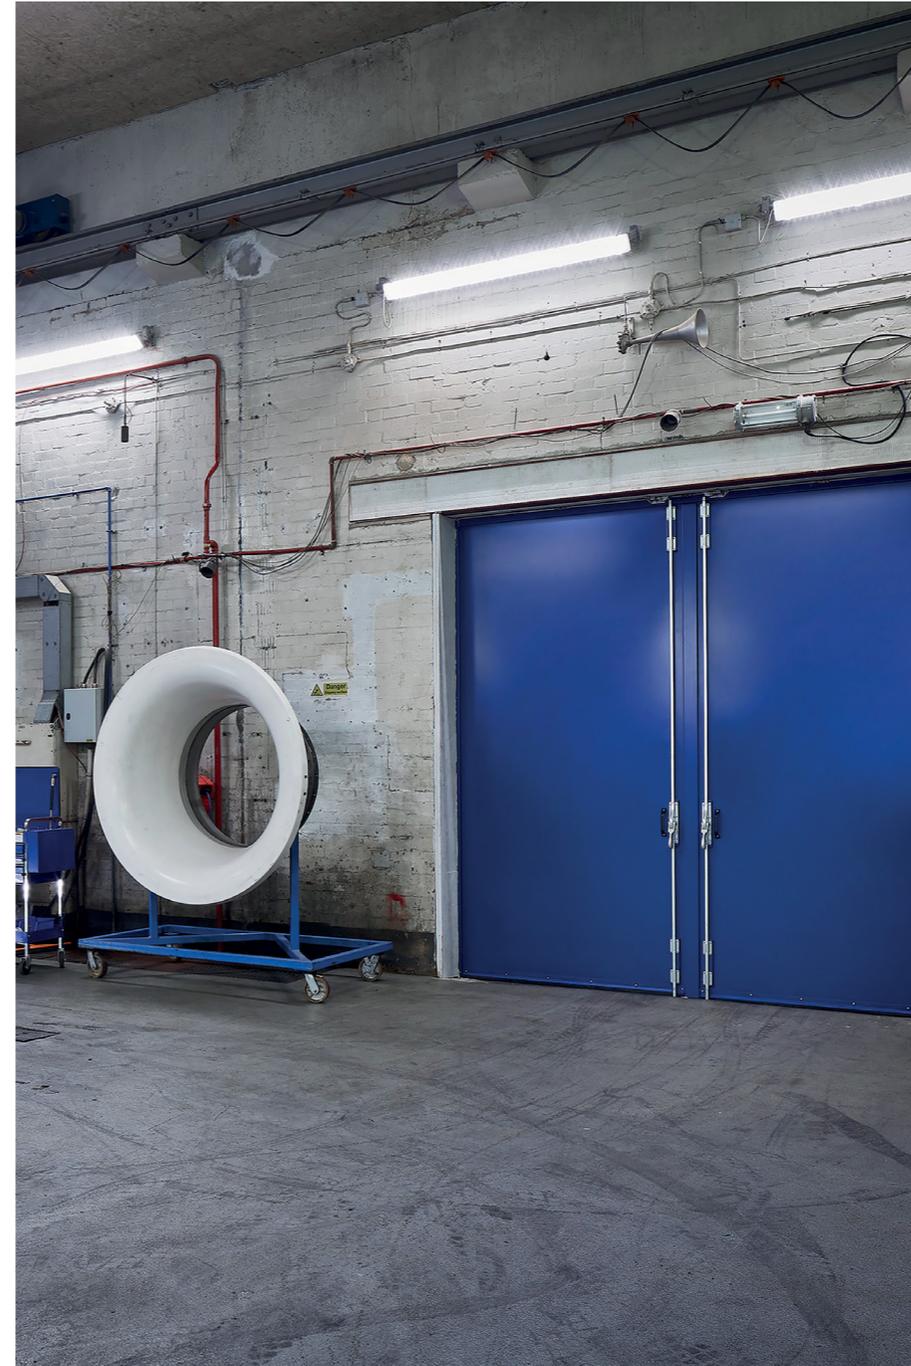

St Luke's Birmingham.

Acoustidor+ Panic Exit Doors

Constructed in 1818, Birmingham's first gas works was bought by the Church of England. Its main function was the supply of gas to illuminate the dark streets. Now re-developed into a vibrant church named St. Luke's, Gas Street offers a different kind of light to the people of the city.

Strongdor worked with local contractors COS Shopfronts, supplying the project with three single Acoustidor+ fire exit doors. Acoustically rated to 42dB, these doors also included security astragals and low profile DDA-approved thresholds. The black powder coating complements the existing substantial ironwork.

Aviation Jet Test Centre.

Acoustidor+ Panic Exit Doors

Summit Aviation has been in the jet engine business for over 25 years. Based in Kent, they specialise in keeping jet engines ready for flight by offering maintenance, repair and overhaul services as well as supply, leasing and testing for second-hand units.

As part of the overhaul, the company ordered Acoustidor+ replacements for the substantial original metal door-sets. The oversized modern steel doors make it easier to transport the heavy engines in and out of the facility without compromising the acoustic damping required to meet noise pollution standards in and around the airport.
